

Package ‘gdalUtilities’

March 21, 2023

Type Package

Title Wrappers for 'GDAL' Utilities Executables

Version 1.2.4

Date 2023-03-20

Author Joshua O'Brien

Maintainer Joshua O'Brien <joshmobrien@gmail.com>

Description R's 'sf' package ships with self-contained 'GDAL' executables, including a bare bones interface to several 'GDAL'-related utility programs collectively known as the 'GDAL utilities'. For each of those utilities, this package provides an R wrapper whose formal arguments closely mirror those of the 'GDAL' command line interface. The utilities operate on data stored in files and typically write their output to other files. Therefore, to process data stored in any of R's more common spatial formats (i.e. those supported by the 'sp', 'sf', and 'raster' packages), first write them to disk, then process them with the package's wrapper functions before reading the outputted results back into R. GDAL function arguments introduced in GDAL version 3.5.2 or earlier are supported.

gdalUtilities-package *Wrappers for 'GDAL' Utilities Executables*

Description

R's 'sf' package ships with self-contained 'GDAL' executables, including a bare bones interface to several 'GDAL'-related utility programs collectively known as the 'GDAL utilities'. For each of those utilities, this package provides an R wrapper whose formal arguments closely mirror those of the 'GDAL' command line interface. The utilities operate on data stored in files and typically write their output to other files. Therefore, to process data stored in any of R's more common spatial formats (i.e. those supported by the 'sp', 'sf', and 'raster' packages), first write them to disk, then process them with the package's wrapper functions before reading the outputted results back into R. GDAL function arguments introduced in GDAL version 3.5.2 or earlier are supported.

Details

The DESCRIPTION file:

Package:	gdalUtilities
Type:	Package
Title:	Wrappers for 'GDAL' Utilities Executables
Version:	1.2.4
Date:	2023-03-20
Author:	Joshua O'Brien
Maintainer:	Joshua O'Brien <joshmobrien@gmail.com>
Description:	R's 'sf' package ships with self-contained 'GDAL' executables, including a bare bones interface to several 'GDAL' utilities.
License:	GPL (>= 2)
URL:	https://github.com/JoshOBrien/gdalUtilities/
BugReports:	https://github.com/JoshOBrien/gdalUtilities/issues/
Imports:	sf (>= 1.0-11)

Suggests: raster (>= 3.6-3), rasterVis, RColorBrewer, testthat, stars
RoxygenNote: 7.2.3
Encoding: UTF-8

Index of help topics:

gdalUtilities-defunct	Defunct function(s) in the gdalUtilities package
gdalUtilities-package	Wrappers for 'GDAL' Utilities Executables
gdal_grid	Interface to GDAL's gdal_grid utility
gdal_rasterize	Interface to GDAL's gdal_rasterize utility
gdal_translate	Interface to GDAL's gdal_translate utility
gdalbuildvrt	Interface to GDAL's gdalbuildvrt utility
gdaldem	Interface to GDAL's gdaldem utility
gdalinfo	Interface to GDAL's gdalinfo utility
gdalmdiminfo	Interface to GDAL's gdalmdiminfo utility
gdalmdimtranslate	Interface to GDAL's gdalmdimtranslate utility
gdalwarp	Interface to GDAL's gdalwarp utility
nearblack	Interface to GDAL's nearblack utility
ogr2ogr	Interface to GDAL's ogr2ogr utility

This section should provide a more detailed overview of how to use the package, including the most important functions.

## Optional simple examples of the most important functions
## Use \dontrun{} around code to be shown but not executed
```

gdalbuildvrt*Interface to GDAL's gdalbuildvrt utility*

Description

This function provides an interface mirroring that of the GDAL command-line app `gdalbuildvrt`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdalbuildvrt.html>.

Usage

```
gdalbuildvrt(  
  gdalfile,  
  output.vrt,  
  ...,  
  tileindex,  
  resolution,  
  te,  
  tr,  
  tap,  
  separate,  
  b,  
  sd,  
  allow_projection_difference,  
  optim,  
  q,  
  addalpha,  
  hidenodata,  
  srcnodata,  
  vrtnodata,  
  ignore_srcmaskband,  
  a_srs,  
  r,  
  oo,  
  input_file_list,  
  strict,  
  non_strict,  
  overwrite,  
  config_options = character(),  
  dryrun = FALSE  
)
```

Arguments

<code>gdalfile</code>	Character vector supplying file paths to one or more input datasets.
<code>output.vrt</code>	Character. Path to output VRT file. Typically, output file will have suffix ".vrt".

...	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
tileindex, resolution, te, tr, tap, separate, b, sd	See the GDAL project's gdalbuildvrt documentation for details.
allow_projection_difference, q, optim, addalpha, hidenodata	See the GDAL project's gdalbuildvrt documentation for details.
srcnodata, vrtodata, ignore_srcmaskband, a_srs, r, oo	See the GDAL project's gdalbuildvrt documentation for details.
input_file_list, strict, non_strict, overwrite	See the GDAL project's gdalbuildvrt documentation for details.
config_options	A named character vector with GDAL config options, of the form <code>c(option1=value1, option2=value2)</code> . (See here for a complete list of supported config options.)
dryrun	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to `output.vrt`.

Author(s)

Joshua O'Brien

Examples

```
## Prepare file paths
td <- tempdir()
out_vrt <- file.path(td, "out.vrt")
layer1 <-
  system.file("extdata/tahoe_lidar_bareearth.tif",
             package = "gdalUtilities")
layer2 <-
  system.file("extdata/tahoe_lidar_highesthit.tif",
             package = "gdalUtilities")

## Build VRT and check that it works
gdalbuildvrt(gdalfile = c(layer1, layer2), output.vrt = out_vrt)
gdalinfo(out_vrt)
```

Description

This function provides an interface mirroring that of the GDAL command-line app `gdaldem`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdaldem.html>.

Usage

```
gdaldem(
  mode,
  input_dem,
  output_map,
  ...,
  of,
  compute_edges,
  alg,
  b,
  co,
  q,
  z,
  s,
  az,
  alt,
  combined,
  multidirectional,
  igor,
  p,
  trigonometric,
  zero_for_flat,
  color_text_file = character(0),
  alpha,
  exact_color_entry,
  nearest_color_entry,
  config_options = character(0),
  dryrun = FALSE
)
```

Arguments

<code>mode</code>	Character, one of "hillshade", "slope", "color-relief", "TRI", "TPI", "roughness", indicating which of the available processing modes is to be used.
<code>input_dem</code>	Path to a GDAL-supported readable DEM datasource.
<code>output_map</code>	Character. Path to a GDAL-supported output file.
<code>...</code>	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
<code>of, compute_edges, alg, b, co, q, z, s, az, alt, combined</code>	See the GDAL project's gdaldem documentation for details.
<code>multidirectional, igor, p, trigonometric, zero_for_flat</code>	See the GDAL project's gdaldem documentation for details.
<code>color_text_file, alpha, exact_color_entry, nearest_color_entry</code>	See the GDAL project's gdaldem documentation for details.
<code>config_options</code>	A named character vector with GDAL config options, of the form <code>c(option1=value1, option2=value2)</code> . (See here for a complete list of supported config options.)

dryrun	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.
--------	--

Value

Silently returns path to `output_map`.

Author(s)

Joshua O'Brien

Examples

```
## Prepare file paths
td <- tempdir()
in_dem <- system.file("extdata/maunga.tif", package = "gdalUtilities")
out_slope <- file.path(td, "slope.tif")
out_shade <- file.path(td, "shade.tif")
out_aspect <- file.path(td, "aspect.tif")

## Apply DEM processing
gdaldem("slope", in_dem, out_slope)
gdaldem("shade", in_dem, out_shade)
gdaldem("aspect", in_dem, out_aspect)

## View results
if(requireNamespace("raster", quietly = TRUE)) {
  library(raster)
  if(require(rasterVis)) {
    lp <- function(f) {
      levelplot(raster(f), main = substitute(f),
                 margin = FALSE, colorkey = FALSE)
    }
    plot(lp(in_dem),      split = c(1,1,2,2))
    plot(lp(out_slope),  split = c(2,1,2,2), newpage = FALSE)
    plot(lp(out_shade),  split = c(1,2,2,2), newpage = FALSE)
    plot(lp(out_aspect), split = c(2,2,2,2), newpage = FALSE)
  }
}
```

Description

This function provides an interface mirroring that of the GDAL command-line app `gdalinfo`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdalinfo.html>.

Usage

```
gdalinfo(
  datasetname,
  ...,
  json,
  mm,
  stats,
  approx_stats,
  hist,
  nogcp,
  nomd,
  norat,
  noct,
  nofl,
  checksum,
  proj4,
  listmdd,
  mdd,
  wkt_format,
  sd,
  oo,
  IF,
  dryrun = FALSE,
  config_options = character(0),
  quiet = FALSE
)
```

Arguments

<code>datasetname</code>	Path to a GDAL-supported readable datasource.
<code>...</code>	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
<code>json, mm, stats, approx_stats, hist, nogcp, nomd, norat, noct</code>	See the GDAL project's gdalinfo documentation for details.
<code>nofl, checksum, proj4, listmdd, mdd, wkt_format, sd, oo, IF</code>	See the GDAL project's gdalinfo documentation for details.
<code>dryrun</code>	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.
<code>config_options</code>	A named character vector with GDAL config options, of the form <code>c(option1=value1, option2=value2)</code> . (See here for a complete list of supported config options.)
<code>quiet</code>	Logical (default FALSE). If TRUE, suppress printing of output to the console.

Value

Silently returns a character vector containing the information returned by the gdalinfo utility.

Author(s)

Joshua O'Brien

Examples

```
ff <- system.file("extdata/maunga.tif", package = "gdalUtilities")
gdalinfo(ff)
```

gdalmdiminfo

Interface to GDAL's gdalmdiminfo utility

Description

This function provides an interface mirroring that of the GDAL command-line app `gdalmdiminfo`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdalmdiminfo.html>.

Usage

```
gdalmdiminfo(
  datasetname,
  ...,
  oo,
  arrayoption,
  detailed,
  nPRETTY,
  array,
  limit,
  stats,
  IF,
  dryrun = FALSE,
  config_options = character(),
  quiet = FALSE
)
```

Arguments

<code>datasetname</code>	Path to a GDAL-supported readable datasource.
<code>...</code>	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
<code>oo, arrayoption, detailed, nPRETTY, array, limit, stats, IF</code>	the GDAL project's gdalmdiminfo documentation for details.
<code>dryrun</code>	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.
<code>config_options</code>	A named character vector with GDAL config options, of the form <code>c(option1=value1, option2=value2)</code> . (See here for a complete list of supported config options.)
<code>quiet</code>	Logical (default FALSE). If TRUE, suppress printing of output to the console.

Value

Silently returns a character vector containing the information in JSON format returned by the gdalmdiminfo utility.

Author(s)

Joshua O'Brien

Examples

```
ff <- system.file("nc/cropped.nc", package = "sf")
gdalmdiminfo(ff)
```

gdalmdimtranslate

Interface to GDAL's gdalmdimtranslate utility

Description

This function provides an interface mirroring that of the GDAL command-line app `gdalmdimtranslate`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdalmdimtranslate.html>.

Usage

```
gdalmdimtranslate(
  src_filename,
  dst_filename,
  ...,
  co,
  IF,
  of,
  array,
  group,
  subset,
  scaleaxes,
  oo,
  config_options = character(0),
  dryrun = FALSE
)
```

Arguments

<code>src_filename</code>	Character. Path to a GDAL-supported readable datasource.
<code>dst_filename</code>	Character. Path to a GDAL-supported output file.

... Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.

`co, IF, of, array, group, subset, scaleaxes, oo`
 See the GDAL project's [gdalmdimtranslate documentation](#) for details.

`config_options` A named character vector with GDAL config options, of the form `c(option1=value1, option2=value2)`. (See [here](#) for a complete list of supported config options.)

`dryrun` Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to `dst_filename`.

Author(s)

Joshua O'Brien

Examples

```
## A simple dataset bundled with the sf package
FF <- system.file("nc/cropped.nc", package = "sf")
td <- tempdir()
out_tiff <- file.path(td, "out.tiff")
gdalinfo(FF)
gdalmdimtranslate(FF, out_tiff, array = "sst")
gdalinfo(out_tiff)

## A more interesting dataset bundled with the stars package
if (requireNamespace("raster", quietly = TRUE)) {
  library(raster)
  FF <- system.file("nc/reduced.nc", package = "stars")
  gdalinfo(FF)
  td <- tempdir()
  out_1_tiff <- file.path(td, "out_1.tiff")
  gdalmdimtranslate(FF, out_1_tiff, array = "sst")
  plot(raster(out_1_tiff),
       main = "Sea Surface Temperature\n(2x2 degree cells)")
  ## Translate to a tiff, coarsen by a factor of 5
  out_2_tiff <- file.path(td, "out_2.tiff")
  gdalmdimtranslate(FF, out_2_tiff, array = "sst",
                    scaleaxes = "lon(5),lat(5)")
  plot(raster(out_2_tiff),
       main = "Sea Surface Temperature\n(10x10 degree cells)")
}
```

gdalUtilities-defunct *Defunct function(s) in the gdalUtilities package*

Description

These functions have been removed from this package.

Usage

```
gRasterize(...)
```

Arguments

...	Function arguments
-----	--------------------

Details

gRasterize was removed due to its dependency on the **raster** package, on which **gdalUtilities** no longer Depends. The source for gRasterize may still be found (and sourced, using devtools::source_gist()) at <https://gist.github.com/JoshOBrien/7cf19b8b686e6d6230a78a1a9799883b>.

gdalwarp

Interface to GDAL's gdalwarp utility

Description

This function provides an interface mirroring that of the GDAL command-line app gdalwarp. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/gdalwarp.html>.

Usage

```
gdalwarp(  
  srcfile,  
  dstfile,  
  ...,  
  s_srs,  
  t_srs,  
  ct,  
  to,  
  vshift,  
  novshift,  
  s_coord_epoch,  
  t_coord_epoch,  
  order,  
  tps,
```

```
    rpc,  
    geoloc,  
    et,  
    refine_gcps,  
    te,  
    te_srs,  
    tr,  
    tap,  
    ts,  
    ovr,  
    wo,  
    ot,  
    wt,  
    r,  
    srcnodata,  
    dstnodata,  
    srcalpha,  
    nosrcalpha,  
    dstalpha,  
    wm,  
    multi,  
    q,  
    IF,  
    of,  
    co,  
    cutline,  
    cl,  
    cwhere,  
    csql,  
    cblend,  
    crop_to_cutline,  
    overwrite,  
    nomd,  
    cvmd,  
    setci,  
    oo,  
    doo,  
    config_options = character(0),  
    dryrun = FALSE  
)
```

Arguments

srcfile	Character. Path to a GDAL-supported readable datasource.
dstfile	Character. Path to a GDAL-supported output file.
...	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.

`s_srs, t_srs, ct, to, vshift, novshift`
 See the GDAL project's [gdalwarp documentation](#) for details.

`s_coord_epoch, t_coord_epoch, order, tps, rpc, geoloc, et`
 See the GDAL project's [gdalwarp documentation](#) for details.

`refine_gcpss, te, te_srs, tr, tap, ts, ovr, wo, ot, wt, r, srcnodata`
 See the GDAL project's [gdalwarp documentation](#) for details.

`dstnodata, srccalpha, nosrccalpha, dstalpha, wmm, multi, q, IF, of, co`
 See the GDAL project's [gdalwarp documentation](#) for details.

`cutline, cl, cwhere, csql, blend, crop_to_cutline, overwrite`
 See the GDAL project's [gdalwarp documentation](#) for details.

`nomd, cvmd, setci, oo, doo`
 See the GDAL project's [gdalwarp documentation](#) for details.

`config_options` A named character vector with GDAL config options, of the form `c(option1=value1, option2=value2)`
 (See [here](#) for a complete list of supported config options.)

`dryrun` Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to dstfile.

Author(s)

Joshua O'Brien

Examples

```
## Prepare file paths
td <- tempdir()
in_tif <- file.path(td, "tahoe.tif")
gcp_tif <- file.path(td, "tahoe_gcp.tif")
out_tif <- file.path(td, "tahoe_warped.tif")

## Set up some ground control points, then warp
file.copy(system.file("extdata/tahoe.tif", package = "gdalUtilities"),
          in_tif)
## Four numbers: column, row, x-coord, y-coord
gcp <- matrix(c(100, 300, -119.93226, 39.28977, ## A
               0,    300, -119.93281, 39.28977, ## B
               100, 400, -119.93226, 39.28922, ## C
               0,    400, -119.93281, 39.28922, ## lower-left
               400,  0,   -119.93067, 39.29136, ## upper-right
               400, 400, -119.93062, 39.28922, ## lower-right
               0,    0,   -119.93281, 39.29141), ## upper-left
               ncol = 4, byrow = TRUE)

## Add ground control points. (For some reason, this drops CRS, so
## it needs to be explicitly given via `a_srs` argument.)
```

```
gdal_translate(in_tif, gcp_tif, gcp = gcp, a_srs = "EPSG:4326")
gdalwarp(gcp_tif, out_tif, r = "bilinear")

## Check that it worked
if(requireNamespace("raster", quietly = TRUE)) {
  library(raster)
  if(require(rasterVis)) {
    r1 <- raster(in_tif)
    p1 <- levelplot(r1, margin = FALSE, colorkey = FALSE)
    r2 <- raster(out_tif)
    p2 <- levelplot(r2, margin = FALSE, colorkey = FALSE)
    plot(p1, split = c(1, 1, 2, 1))
    plot(p2, split = c(2, 1, 2, 1), newpage = FALSE)
  }
}
```

gdal_grid*Interface to GDAL's gdal_grid utility*

Description

This function provides an interface mirroring that of the GDAL command-line app `gdal_grid`. For a description of the utility and the arguments that it takes, see the documentation at https://gdal.org/programs/gdal_grid.html.

Usage

```
gdal_grid(
  src_datasource,
  dst_filename,
  ...,
  ot,
  of,
  txe,
  tye,
  tr,
  outsize,
  a_srs,
  zfield,
  z_increase,
  z_multiply,
  a,
  spat,
  clipsrc,
  clipsrcsql,
  clipsrclayer,
  clipsrcwhere,
```

```

  l,
  where,
  sql,
  co,
  q,
  config_options = character(0),
  dryrun = FALSE
)

```

Arguments

`src_datasource` Character. Path to a GDAL-supported readable datasource.

`dst_filename` Character. Path to a GDAL-supported output file.

`...` Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.

`ot, of, txe, tye, tr, outsize, a_srs, zfield, z_increase, z_multiply`
 See the GDAL project's [gdal_grid documentation](#) for details.

`a, spat, clipsrc, clipsrcsql, clipsrclayer, clipsrcwhere`
 See the GDAL project's [gdal_grid documentation](#) for details.

`l, where, sql, co, q`
 See the GDAL project's [gdal_grid documentation](#) for details.

`config_options` A named character vector with GDAL config options, of the form `c(option1=value1, option2=value2)`. (See [here](#) for a complete list of supported config options.)

`dryrun` Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to `dst_filename`.

Author(s)

Examples

```

## Set up file paths
td <- tempdir()
dem_file <- file.path(td, "dem.csv")
vrt_header_file <- file.path(td, "tmp.vrt")
out_raster <- file.path(td, "tmp.tiff")

## Create file of points with x-, y-, and z-coordinates
pts <-
  data.frame(Easting = c(86943.4, 87124.3, 86962.4, 87077.6),
             Northing = c(891957, 892075, 892321, 891995),

```

```

Elevation = c(139.13, 135.01, 182.04, 135.01))
write.csv(pts, file = dem_file, row.names = FALSE)

## Prepare a matching VRT file
vrt_header <- c(
  '<OGRVRTDataSource>',
  '  <OGRVRTLayer name="dem">',
  '    <SrcDataSource>', dem_file, '</SrcDataSource>'),
  '    <GeometryType>wkbPoint</GeometryType>',
  '    <GeometryField encoding="PointFromColumns" x="Easting" y="Northing" z="Elevation"/>',
  '  </OGRVRTLayer>',
  '</OGRVRTDataSource>'
)
cat(vrt_header, file = vrt_header_file, sep = "\n")

## Test it out
gdal_grid(src_datasource = vrt_header_file,
          dst_filename = out_raster,
          a = "invdist:power=2.0:smoothing=1.0",
          txe = c(85000, 89000), tye = c(894000, 890000),
          outsize = c(400, 400),
          of = "GTiff", ot = "Float64", l = "dem")

## Check that it works
if(requireNamespace("raster", quietly = TRUE)) {
  library(raster)
  plot(raster(out_raster))
  text(Northing ~ Easting, data = pts,
       labels = seq_len(nrow(pts)), cex = 0.7)
}

```

Description

This function provides an interface mirroring that of the GDAL command-line app `gdal_rasterize`. For a description of the utility and the arguments that it takes, see the documentation at https://gdal.org/programs/gdal_rasterize.html.

Usage

```

gdal_rasterize(
  src_datasource,
  dst_filename,
  ...,
  b,
  i,

```

```

at,
burn,
a,
threeD,
add,
l,
where,
sql,
dialect,
of,
a_srs,
to,
co,
a_nodata,
init,
te,
tr,
tap,
ts,
ot,
optim,
q,
config_options = character(0),
dryrun = FALSE
)

```

Arguments

<code>src_datasource</code>	Character. Path to a GDAL-supported readable datasource.
<code>dst_filename</code>	Character. Path to a GDAL-supported output file.
<code>...</code>	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
<code>b, i, at, burn, a, threeD, add, l, where, sql, dialect, of</code>	See the GDAL project's gdal_rasterize documentation for details.
<code>a_srs, to, co, a_nodata, init, te, tr, tap, ts, ot, optim, q</code>	See the GDAL project's gdal_rasterize documentation for details.
<code>config_options</code>	A named character vector with GDAL config options, of the form <code>c(option1=value1, option2=value2)</code> . (See here for a complete list of supported config options.)
<code>dryrun</code>	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to `dst_filename`.

Author(s)

Joshua O'Brien

Examples

```
if(requireNamespace("raster", quietly = TRUE)) {
  library(raster)
  ## Prepare file paths of example shapefile and template raster file
  vect_file <- system.file("external/lux.shp", package = "raster")
  td <- tempdir()
  rast_file <- file.path(td, "lux_rast.tif")

  ## Construct and save an appropriately sized 'empty' raster
  SPDF <- shapefile(vect_file)
  lonlatratio <- 1 / cospi(mean(coordinates(SPDF)[,2]) / 180)
  rr <- raster(extent(SPDF),
               resolution = c(lonlatratio * 0.01, 0.01),
               crs = crs(SPDF))
  ## Note: this next line warns that raster is empty
  writeRaster(rr, filename = rast_file, overwrite = TRUE)

  ## Rasterize polygon using empty raster and check that it worked
  gdal_rasterize(vect_file, rast_file, a = "ID_2")
  plot(raster(rast_file))
}
```

Description

This function provides an interface mirroring that of the GDAL command-line app `gdal_translate`. For a description of the utility and the arguments that it takes, see the documentation at https://gdal.org/programs/gdal_translate.html.

Usage

```
gdal_translate(
  src_dataset,
  dst_dataset,
  ...,
  ot,
  strict,
  IF,
  of,
  b,
```

```

mask,
expand,
outsize,
tr,
r,
scale,
exponent,
unscale,
srcwin,
projwin,
projwin_srs,
srs,
epo,
eco,
a_srs,
a_coord_epoch,
a_ullr,
a_nodata,
a_scale,
a_offset,
colorinterp,
mo,
co,
nogcp,
gcp,
q,
sds,
stats,
noxmp,
norat,
oo,
sd_index,
config_options = character(0),
dryrun = FALSE
)

```

Arguments

<code>src_dataset</code>	Character. Path to a GDAL-supported readable datasource.
<code>dst_dataset</code>	Character. Path to a GDAL-supported output file.
<code>...</code>	Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.
<code>ot, strict, IF, of, b, mask, expand, outsize, tr, r, scale, exponent</code>	See the GDAL project's gdal_translate documentation for details.
<code>unscale, srcwin, projwin, projwin_srs, srs, epo, eco</code>	See the GDAL project's gdal_translate documentation for details.
<code>a_srs, a_coord_epoch, a_ullr, a_nodata, a_scale, a_offset</code>	See the GDAL project's gdal_translate documentation for details.

colorinterp	Along with colorinterp, arguments named colorinterp_bn, where bn refers to the number of a band are also allowed. See the GDAL project's gdal_translate documentation for details.
mo, co, nogcp, gcp, q, sds, stats, norat, noxmp, oo, sd_index	See the GDAL project's gdal_translate documentation for details.
config_options	A named character vector with GDAL config options, of the form c(option1=value1, option2=value2). (See here for a complete list of supported config options.)
dryrun	Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL, the function will print the command-line call that would produce the equivalent output.

Value

Silently returns path to dst_dataset.

plot(p2, split = c(2, 1, 2, 1), newpage = FALSE)

}
}

```

nearblack*Interface to GDAL's nearblack utility***Description**

This function provides an interface mirroring that of the GDAL command-line app `nearblack`. For a description of the utility and the arguments that it takes, see the documentation at <https://gdal.org/programs/nearblack.html>.

Usage

```

nearblack(
  infile,
  o = infile,
  ...,
  of,
  white,
  color,
  near,
  nb,
  setalpha,
  setmask,
  q,
  co,
  config_options = character(),
  dryrun = FALSE
)

```

Arguments

- | | |
|---------------------|---|
| <code>infile</code> | Character. Path to a GDAL-supported readable datasource. |
| <code>o</code> | Optionally, a character string giving the path to a GDAL-supported output file. If not supplied, defaults to <code>codeinfile=</code> , indicating that the input file should be modified in place. |
| <code>...</code> | Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments. |

```

of, white, color, near, nb, setalpha, setmask, q, co
      See the GDAL project's nearblack documentation for details.
config_options A named character vector with GDAL config options, of the form c(option1=value1,
                           option2=value2). (See here for a complete list of supported config options.)
dryrun Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL,
           the function will print the command-line call that would produce the equivalent
           output.

```

Value

Silently returns path to o.

Author(s)

    unsetDefault,
    nomd,
    mo,
    noNativeData,
    config_options = character(0),
    dryrun = FALSE
)
```

Arguments

src_datasource_name
Character. Path to a GDAL-supported readable datasource.

dst_datasource_name
Character. Path to a GDAL-supported output file.

...
Here, a placeholder argument that forces users to supply exact names of all subsequent formal arguments.

layer, f, append, overwrite, update, select, progress, sql, dialect
See the GDAL project's [ogr2ogr documentation](#) for details.

where, skipfailures, spat, spat_srs, geomfield, dsc0, lco, nln, nlt
See [ogr2ogr documentation](#).

dim, a_srs, t_srs, s_srs, ct, preserve_fid, fid, limit, oo, doo, gt
See [See ogr2ogr documentation](#).

ds_transaction, clipsrc, clipsrcsql, clipsrclayer, clipsrcwhere
See [ogr2ogr documentation](#).

clipdst, clipdstsql, clipdstlayer, clipdstwhere, wrapdateline
See [ogr2ogr documentation](#).

datelineoffset, simplify, segmentize, makevalid, addfields
See [See ogr2ogr documentation](#).

```

fieldmap, splitlistfields, maxsubfields
  See ogr2ogr documentation.
resolveDomains, explodecollections, zfield, gcp, order, tps
  See ogr2ogr documentation.
s_coord_epoch, t_coord_epoch, a_coord_epoch
  See ogr2ogr documentation.
unsetFid, emptyStrAsNull, relaxedFieldNameMatch, forceNullable
  See See ogr2ogr documentation.
unsetDefault, fieldTypeToString, unsetFieldWidth, mapFieldType
  See ogr2ogr documentation.
nomd, mo, noNativeData
  See ogr2ogr documentation.
config_options A named character vector with GDAL config options, of the form c(option1=value1,
  option2=value2). (See here for a complete list of supported config options.)
dryrun Logical (default FALSE). If TRUE, instead of executing the requested call to GDAL,
  the function will print the command-line call that would produce the equivalent
  output.

```

Value

Silently returns path to dst_datasource_name.
